

Adlib Software

Supported File Types

Adlib's ExpressConversion Server converts hundreds of file formats to PDF and Text including office, image, graphic, web, engineering and legacy files. File rendering is performed using one of the following three rendering components described below:

1. Integrated File Type Support (IFTS) – is used to render Plain (ASCII) Text, Images, and HPGL, MSG and PDF file types.
2. Native Application Support (NAS) – uses native applications (e.g. Microsoft Excel) to render documents (e.g. xls). The native application (e.g. Microsoft Excel) must be installed on the computer performing the conversion and be supported by Conversion Server.
3. Extended File Type Support (EFTS) –extends the rendering capability to over 300 file types. This method ensures the highest rendering efficiency without requiring additional software to be installed on the computer performing the conversion.

The table below contains the most common file types and versions/format supported by Adlib ExpressConversion Server. It also indicates which Conversion rendering component (IFTS, NAS, EFTS) supports the file type. Additional file types are continually being added. If the file type you are looking for is not listed, please email us at support@adlibsoftware.com.

Tip: Press 'CTRL+F' and enter the file extension or application name you are searching for.

File Type	File Extensions	Versions/Formats	IFTS	NAS	EFTS
Adobe Acrobat	PDF	All	✓		
Adobe FrameMaker	MIF	6.0			✓
Adobe FrameMaker	FM	6.0		✓
