

# Extended Output Module

## Convert Documents to Image, Office®, Web and XPS

The business case for converting various documents into PDF's is clear. It has become familiar functionality in many Content Management Systems and easily provides a common platform for sharing documents and standardizing information. Reversing the process by converting PDF's to other document types is a little less common but by no means less important to those who need it. Often companies need to repurpose the content of a PDF and usually revert to manually replicating the content in another reusable format.

Built to work with Adlib Express Server applications, Adlib Software has created an Extended Output module that allows companies to automatically convert PDF documents into other reusable type documents such as DOC, RTF, HTML, JPEG, PNG, .TIFF and XPS. This module supports the conversion of multiple formats to multiple formats when combined with Adlib ExpressConversion Server. The entire process can be automated, avoiding the need to have any human-machine interface.

### Office® Output

Extended Output for Office supports the conversion of PDF to Microsoft® Word formats such as DOC and RTF. With support for automated processes and workflows and unsurpassed reliability and fidelity, which has become a hallmark for all Adlib products; users spend more time working with content while eliminating cumbersome and often error-prone data entry processes. Even complex documents, fonts, images, margins, columns and tables are preserved – removing the need for extensive reformatting.

### Image Output

Extended Output for Images supports the conversion of PDF to image formats such as JPEG, PNG and TIFF. Creating image documents is a critical part of many workflows including eDiscovery, Litigation, Support and Archival. The Extended Output Add-On transforms various document formats into a single or multi-page TIFF, JPG or PNG. This feature is also exceptionally useful for instantly creating thumbnail previews of documents for use on the web.

### Web Output

Extended Output for the Web supports the conversion of PDF to standard web-ready HTML files for publishing content from PDF's to websites, blogs or other internet-based media. This is an exceptionally useful tool when considering the time and effort of a traditionally error-prone manual process. HTML output helps to reduce file size, speed document view rendering and makes the resulting file format more platform independent.

### XPS Output

The Extended Output for XML provides users with a robust, open and trustworthy electronic paper format alternative to PDF. The XML Paper Specification describes electronic paper in a way that can be read by hardware, software, and people. XPS documents can be printed, shared, and archived with confidence.

Convert documents to:

- HTML
- JPEG
- RTF
- XPS
- PNG
- DOC
- TIFF
